

vR3

For quality of life
in communities and park facilities.

With a helpful presence and reliable use for cleanliness, safety and order (if necessary, even overnight), the communal operations and their staff create value in everyday life. vRbikes builds the suitable community vehicle for this, the vR3: swiss made, electric, innovative, roust and sustainably economical. Because it can be driven from the age of 16, it can also ease a student's path to independence.

The vR3 community vehicle is perfect for work such as pre-sweeping green material transport, transporting cleaning equipment or for waste disposal, as occurs in cities, communities, on camp-sites, in parks or even in zoos.

Special container for the efficient management of communities

Based on the vR3 WIDEBOY. vRbikes developed an all-purpose module for the most varied of jobs in cooperation with multiple community operations facilities and maintenance centres. Holders for 4 long-handled tools are integrated into the frame of the container. Thanks to the large transport volume, a trailer is usually not needed with the vR3 WIDEBOY. If it is, the vR3 has a towing capacity of 200 kg.

Holder for standard containers

In practically all communities, parks and zoos, or even on camp-sites, we see the usual standard waste and green containers. vRbikes has developed a holder for the standard variant of the vR3 as well as for the WIDEBOY version, with which these containers, too, can be transported and emptied in the easiest manner.
